Update of the IT landscape

 www.hygiene-oederan.de

About SIGMA

As a reputable system house in Saxony SIGMA Chemnitz GmbH operates as system integrator and partner of well-known Providers in the IT sector. Our over 80 employees at the Chemnitz and Dresden sites form a competent team at the location Chemnitz. With expertise, competence and over 30 years of experience we offer our customers reliable and powerful solutions.

About our client

Since its foundation in 1993 Hygiene Oederan Produktionsgesellschaft mbH is a specialist for the complete range of modern feminine hygiene products and supplies these under its own brands as well as private labels as a supplier to international brand companies.

The project

In order to be optimally prepared for the future, it was important for the company to update its IT landscape to meet current requirements. The goal was not only to invest in new hardware, but also to take advantage of the opportunity offered by the change to achieve a better protection of operations through a backup and recovery concept. Above all, the new technology should have laid the foundation for future software to be used in order to prepare the company for the future. The concept developed in the sales process was specified in more detail in a detailed planning phase. In this process, checklists were filled out together with the customers to create the basis for the installation. The resulting planning document served as a guideline for the installation. In addition, the involvement and cooperation of the customer (for example, in the creation of a separate circuit or in the preparation of schedules and project plans) significantly reduced the project risk during the ongoing project.

The realization of the project

The old existing hardware was replaced with new powerful and efficient Primergy servers and an ETERNUS storage system from Fujitsu, using RX200 servers and a modern ETERNUS DX100 S3 storage. The new machines were virtualized with the help of VMware and the data was backed up using VEEAM backup software.

A corresponding long-term test of the functionality was as much part of the service as well as the briefing of the responsible IT managers.

This is what our customer says...

„With the solution offered by SIGMA Chemnitz GmbH, we have brought our IT infrastructure up to date again. Now we can expand it flexibly. Especially the detailed planning phase at the beginning was important for us and gave us security in the implementation. We have found a competent and reliable partner in SIGMA Chemnitz GmbH.“

Eddy Steier, IT manager of Hygiene Oederan Produktionsgesellschaft mbH
