Digital logistics at fiberware Generalunternehmen für Nachrichtentechnik GmbH

🌐 **www.fiberware.de**

About SIGMA

The SIGMA Chemnitz GmbH parent company is an experienced system house with over 80 employees at the Chemnitz and Dresden sites and has been offering a wide range of professional services in the fields of information technology, management and organization since 1990. The group of companies has had ERP experience since 1993.
SIGMA Software und Consulting GmbH has been maintaining an intensive partnership with SAP in the field of medium-sized business solutions since 2007.
All our consultants, developers and sales staff are certified by SAP and continuously undergo extensive training. We love SAP Business One!

About fiberware

The company fiberware Generalunternehmen für Nachrichtentechnik GmbH was founded in 1990 by Dr. Georg Kuka in Berlin. In 1996, the company moved to Mittweida, where a new, state-of-the-art production facility was built. Today, fiberware is a globally recognized and leading manufacturer of special optical fibers, special cables, fiber optic sensors, fiber bundles, capillaries and other fiber optic products for standard and special applications. The company's expertise lies in ensuring the highest quality of products and in developing product innovations in close cooperation with its customers.

Digital logistics with SAP Business One

The company „fiberware Generalunternehmen für Nachrichtentechnik GmbH" from Mittweida relies on the digital logistics solutions of the company „SIGMA Software und Consulting GmbH". For the company, which produces high-quality fiber optic products for a wide range of industries, the SIGMA App Mobile Warehouse Management is the ideal complement to the already existing SAP Business One ERP system.

Using SIGMA Mobile Warehouse Management, inventories and goods receipts can be digitized and recorded in the system on the move for further processing. The goods required for production are simply scanned by handheld and transferred to SAP Business One at the touch of a button. In the process, the system automatically assigns batch numbers, which can be immediately printed out with a label generated in the system and applied to the new goods. This allows each item to be clearly identified and recorded throughout the entire production and warehouse process. A subsequent automated process enriches this data with further supplier data transferred via EDI.

Digitization of stock transfers

The logistics modules „stock information display" and „stock transfer" are also used at the company „fiberware Generalunternehmen für Nachrichtentechnik GmbH". Thus, by means of a few scans, the goods are transferred from the goods receipt warehouse directly to the production warehouse and are thus promptly and effectively ready for production. The stock transfer created in this way in the system is then transferred fully automatically to the Graidware production module from „SIGMA Gesellschaft für Systementwicklung u. Datenverarb. mbH" and can be processed directly in production.
